

The diagram below shows all the components of a bumper cover for a 1997 Mercedes Benz 230. There are 25 pieces to this cover. Each part is necessary for this cover to fit properly. Some of the pieces are located behind the bumper cover itself and this makes it hard for us to see if they are damaged or not. The basis premise we utilize for estimating purposes is this...we write what we can see. If we cannot see it but think it is damaged you should see a note on the estimate that talks to that subject. I hope this has been helpful in understanding the disclaimers that are sometimes found on estimates.
